**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Douglas Holtz on June 20, 2008.

Applicant has authorized the following amendments to the abstract to be as follows:

"A control unit outputs control information including time setting information for a transition test of a connection state of a mobile communication terminal of a cellular system. In accordance with the control information, a transmission/reception unit generates a plurality of test signals including predetermined messages to a plurality of cells, and varies them in accordance with a scheduled time passage to transmit them to the terminal and receive response signals including predetermined messages from the terminal. A measurement unit measures time domain waveforms of the response signals, and an acquiring unit acquires and stores messages and radio-communication time information when the messages are exchanged. A display unit displays graphs indicating measured results of the waveforms and a predetermined number of radio-communication markers indicating points in radio-communication time

corresponding to the time information by a graphic display capable of simultaneously comparing at both sides of the same time base."

***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance:

The best prior art of record, Morikawa et al and Tanaka et al show all features of newly amended claims 4 and 23, but do not specifically teach the features of "wherein the reception measurement unit has a function of measuring a transition time that, in accordance with a response signal from the mobile communication terminal, until it is switched from a state in which the mobile communication terminal receives a first test signal showing a greater strength at a current point in time among the plurality of test signals to a state in which the mobile communication terminal receives a second test signal having a second greater strength among the plurality of test signals accompanying that the plurality of test signals are varied to be successively made to be a greater strength in accordance with the scheduled time passage, the test system for a mobile communication terminal further comprises a determining unit which, upon receiving the measured results of the transition time from the reception measurement unit, carries out success/failure determination as to whether a transition has been a success or a failure in which the mobile communication terminal switches from a state of receiving the first test signal to a state of receiving the second test signal

among the plurality of test signals corresponding to the plurality of cells in accordance with the control information from the test procedure control unit, and the data display control unit causes to display capable of recognizing a success/failure as a result of the success/failure determination by the determining unit together with a corresponding radio-communication marker among the predetermined number of radio-communication markers displayed by means of the radio-communication marker generating unit".

Therefore, newly amended claims 4 and 23 are considered non-obvious and thus would be allowable subject matter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
